

Agro ABC

Your reliability in science-based training & knowledge-support services in food safety, management systems and risk analysis along agro-food chain

Agro ABC is an **independent non profit organization** within the Primoris Holding. Its major goal is to perform scientific research related to food safety, food safety and quality management systems and risk assessment & analysis and to provide training and knowledge-support services to organisations in the agro-food chain. Our activities are backboned by up-to-date scientific knowledge and legislative status. Focus group are sector associations, cooperatives or food business operating in primary production or food processing within Belgium, Europe or globally. Agro ABC is operating in the triangle of scientific knowledge, legislative status and practical implementation in food businesses.

Central themes are development of techniques and methodologies for the management of food safety, quality assurance and risk assessment e.g.:

- ④ Risk based sampling of raw materials to verify suppliers and incoming raw materials;
- ④ Sector based sampling plans;
- ④ Validation and verification of food safety and quality management systems;
- ④ Trend analysis of assembled data in a food business to filter and identify improvement processes in a food safety and quality management system;
- ④ Or upcoming topics of interest for organizations along the agro food chain

Knowledge-supported services towards companies and organizations along the agro-food chain are e.g.:

- ④ Guidance documents on good practices, prerequisite programs and HACCP;
- ④ Risk analysis and risk evaluation of production processes in the frame of a food safety management system and HACCP;
- ④ Validation and verification of food safety and quality management systems
